***Now It's Easy To
Create These Exciting
Shapes And More!***

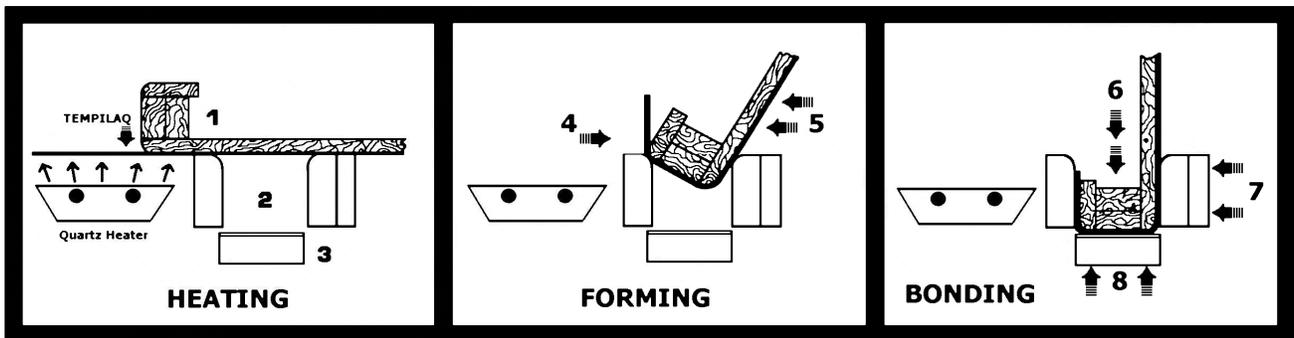

Produce hundreds of wraps everyday!

The demand has been to produce the 180° wrap quickly, more efficiently and to wrap all the way around with only one seam on the backside. To this end, we have designed the Model SF-12 and Model SF-6 Slotformer. This is the quickest, easiest and least expensive method of obtaining a full wrap around. In a matter of minutes an inexperienced operator can learn how to produce 180° wraps. You can bend all formable high pressure laminates from the thicker counter top materials to the thinner cabinet and surfacing materials as well as real wood veneers. 90° bends, no drip edges and a multitude of other shapes can also be formed easily on this machine. This product will produce hundreds of wraps per day and will make money for your company. If you are interested or have further questions, call today or visit our website at www.schultzform.com.

Quartz Heaters And Coving Tubes Also Available

Model SF-12

- 1. EDGE TO BE FORMED
- 2. PREADJUSTED SLOT
- 3. LOWER PRESSURE

- 4. SLIDE COUNTERTOP BACK
- 5. ROLL INTO SLOT

- 6. BOTTOM INTO SLOT
- 7. APPLY SIDE PRESSURE
- 8. APPLY BOTTOM PRESSURE

On each model the rear platen is adjustable down from 6¼" to whatever diameter rolled edge is desired. On Model SF-12, the front and lower pressure platens are divided at the center to allow for individual operation. A switch on the control panel marked 12 ft./6 ft. selects the mode required. Located along the SF-12 front edge are left and right hand switches. In the 6ft. mode, each switch operates the left or right pressure platens respectively. In the 12 ft. mode, either switch operates the entire pressure length. The rear adjustable platen and Dual Quartz Heater remain full length during all operations. On both models, the lower pressure platen need not be activated when doing 180° full wraps and may be turned off as required.

Model SF-12 is 150" long, 26" wide and 30" high. The Dual Element Quartz Heater, included, is 157" long and 6" wide. A simple connection is provided for the 208/230 volt, 1 phase, 40 amps power. An air regulator and gauge is located on the equipment for easy access. One 2 oz. bottle of Tempilaq is included along with complete instructions on both models.

Model SF-6 is 78" long with all the features of the 12 ft. model and is designed for those who do not require a divided front platen. Power requirements for the 6 ft. model are 208/230 volt, 1 phase, 30 amps. All equipment comes with a limited one-year warranty.
